### **dpiX, LLC Announces Expansion Plan to Meet Growing Demand**

**PALO ALTO, Calif., April 5, 2006** – dpiX, LLC announces a new facility to expand its production capacity to meet the growing demand of the digital x-ray sensor market. Headquartered in Palo Alto, California, the new facility will be located in Colorado Springs, Colorado, and employ approximately 125 people, including engineers (42%), operators (33%), and administrative positions (25%).

According to Dr. John Manning, President and CEO, “dpiX, LLC is the world’s largest volume supplier of quality amorphous silicon (a-Si) sensors for digital x-ray imaging. This investment will allow dpiX to continue to meet the future needs of our customers.” The initial market growth area using the sensors manufactured by dpiX is medical x-ray imaging. As this new technology has become accepted, other industries are finding similar benefits and making the conversion from x-ray film and other fluoroscopic x-ray techniques. dpiX has been producing large area digital x-ray sensors since 1990, and products have been in medical use since 1993.

“We have looked throughout the US and Asia for the best possible expansion site for our unique technology and have found it in Colorado Springs. I appreciate the great job that the EDC has done in making this decision an easy one. We’re excited about becoming part of the Colorado Springs economy,” says Manning. Colorado Springs was chosen for dpiX’s new facility as it features a desirable work force, excellent education system, and a superb quality of life. The Greater Colorado Springs Economic Development Corporation has been and continues to be an asset to dpiX.

“We are proud dpiX, LLC has selected Colorado Springs for its new facility,” commented Mike Kazmierski, President of the EDC. “This is exactly the type of company we are seeking to expand our existing high tech base. We will continue to work closely with dpiX to support their needs as they grow in Colorado Springs.”

Originally part of Xerox PARC and now a consortium of major medical x-ray imaging system companies, dpiX is a specialized semiconductor fabricator that designs and manufactures amorphous-silicon (a-Si) digital x-ray sensor arrays for the medical, dental, veterinary, security, and non-destructive testing (NDT) global markets. dpiX is ISO 9001 and ISO 14001 certified.
